

## **Copenhagen Malmö Ports new Konecranes Gottwald Mobile Harbour Cranes are now operational in Swedeharbour Terminal in Malmö**

*The two new GHMK 6507 B 4-rope cranes, each have 125 tons heavy lifting capacity, out to 20 m radius.*

*Initially the cranes mainly handle scrap. Max. grab capacity is 50 tons at 32 m radius.*

The cranes will be externally powered through a 10 kV electrical power supply. Now, as before, environmental issues play an important role at CMP and it is worth noting that the new cranes are the most silent and the least power hungry on the market.

CMP operators and maintenance staff are trained to take full advantage of the new cranes' high speed and increased capacity, which will be of benefit to all CMP customers.

Port-Trade is responsible for service support and parts supply under a 3-year service contract.
