

## Two Terex Gottwald mobile harbour cranes for EIMSKIP have safely arrived in Iceland

*As announced earlier, Eimskip Islands ehf., a leading and growing shipping company, operating in the entire North Atlantic, ordered two Terex Gottwald model 6 mobile harbour cranes.*

During the summer of 2015, the new cranes were shipped to Iceland on board Big Lift heavy lift vessel MV Happy Dover and were safely unloaded.

The first one at Reydarfjordur on Iceland's east coast, where it will handle cargo for the local Alcoa Fjardaal aluminium factory. Within a couple of hours after arrival, the new crane commenced operation, unloading raw materials for the Alcoa smelter, from a coaster.

Before departure, the vessel took on board a Gottwald HMK 300 E, destined for Reykjavik.

The second new crane, shown below, was subsequently delivered to Eimskip's terminal at Grundartangi, where it will handle cargo for Nordural, Elkem and others.
